Education

University of California, San Diego

La Jolla

Bachelor of Science in Biology with Specialization in Bioinformatics

Expected Grad: 2028

<u>Relevant coursework:</u> Introduction to OOP, Data Structures, Algorithms, Systems Programming and Computer Organization, Assembly Programming, Discrete Mathematics, Advanced R Programming, Linear Algebra,

Multivariable Calculus, Probability and Statistics

Experience

Software Intern

WildGenomics

La Jolla 03/2025 - Present

- Built a Python pipeline to analyze plant-related airborne genetic data
- · Reduced sequencing data loss with a custom demultiplexing script
- · Created a local FASTQ/BLAST file parser and species-tracking ML model
- · Aimed to minimize fertilizer use by targeting infested farmland zones
- · Tools: Python, ONT Barcoder, OpenCV, Pandas, NumPy, Seaborn

Projects

NebulaDB | C++, Crow, Linux

- · Built a modular in-memory database engine with SQL-like shell and B+ Tree indexing
- · Implemented ACID-style transaction scaffolding, lock manager, and thread pool concurrency
- · Integrated optional REST API using Crow to accept raw SQL over HTTP
- · Designed clean separation of engine, parser, and storage layers with unit testing and benchmarking

ClimateLens | R, Shiny, ggplot2, Leaflet

- · Developed an interactive R Shiny dashboard to visualize global climate change data
- Included modules for CO₂ emissions, sea level rise, deforestation, and polar ice mass loss
- $\cdot \ \text{Integrated map-based and trend visualizations with regression forecasting for climate metrics} \\$
- $\bullet \ \mathsf{Designed} \ \mathsf{a} \ \mathsf{modular} \ \mathsf{plotting} \ \mathsf{system} \ \mathsf{for} \ \mathsf{extensibility} \ \mathsf{and} \ \mathsf{user} \ \mathsf{interaction}$

StudySync | React, Node.js, TypeScript, Claude API

- · Built a full-stack AI flashcard app that generates quizzes from the Claude API based on user category
- · Implemented quiz modes including timer, stopwatch, and difficulty filters
- Allowed users to create cards or upload notes for batch flashcard generation manually
- \bullet Designed a clean tab-based UI for quiz, card creation, and document upload

OpenLabel | Python, OpenCV, CustomTkinter, Gemini API

- $\bullet \ \mathsf{Created} \ \mathsf{a} \ \mathsf{desktop} \ \mathsf{app} \ \mathsf{that} \ \mathsf{identifies} \ \mathsf{grocery} \ \mathsf{items} \ \mathsf{and} \ \mathsf{analyzes} \ \mathsf{ingredients} \ \mathsf{from} \ \mathsf{images}$
- Used OpenCV for live image capture and Gemini API for brand detection and health verdicts
- Generated personalized nutrition summaries and recommended safer alternatives
- · Avoided barcode dependency by leveraging visual packaging recognition

Mini Shell | C, Linux, POSIX, GNU Readline

- · Developed a custom command-line shell with support for piping, redirection, and job control
- · Added alias persistence, tab completion, command substitution, and environment variable expansion
- $\boldsymbol{\cdot} \ \mathsf{Supported} \ \mathsf{script} \ \mathsf{execution}, \ \mathsf{command} \ \mathsf{chaining}, \ \mathsf{runtime} \ \mathsf{timers}, \ \mathsf{and} \ \mathsf{colored} \ \mathsf{prompts}$
- Implemented background job handling (fg, bg, kill) and .rc file-based customization

Aletheia | Python, Streamlit, Gemini API, Slack API

- Designed a multi-agent health assistant that parses medical docs and identifies pills from images
- Implemented an insurance trust index and AI chat assistant with transparent reasoning
- · Integrated FDA datasets and Slack escalation for urgent medical cases
- · Built a secure, Streamlit-based UI with real-time uploads and agent feedback

Technical Skills

Languages: Java, Python, R, Typescript, HTML/CSS, Javascript, C, C++

Frameworks: React, Node.js, JUnit, Express.js, Pandas, Numpy, MatplotLib, OpenCV, ggplot2, leaflet, crow

Developer Tools: Git, VSCode, Github, Streamlit
